Print Ready **Artwork Guidelines**

All templates are .pdf files that can be opened in Adobe Illustrator. If using Adobe InDesign, set your document to the correct size and lift the dieline from Adobe Illustrator.

1. File Format

- To ensure the best print quality, we prefer **print-ready PDF** files created in **Adobe Illustrator** or **InDesign**
- Canva artwork is accepted when supplied as a **print-ready PDF** files or as a **shared link**.
Please follow these steps:
 - *Click Share in Canva*
 - Under Link shared publicly, select "Anyone with the link" – **Can edit**
 - *Copy the link and send it to us (we can download and prepare the print ready file)*

We do not recommend printing from .PNG or .JPG files, as these formats are not suitable for professional print production

2. Images

- All images must be supplied at **300dpi** to ensure sharp, high-quality printing
- **Embed all images and linked files** within the artwork
- Keep the total file size to a **maximum of 10MB**

3. Colours

- All artwork must be supplied in **CMYK colour mode**
- We recommend using the **rich black colour swatch** for all black within the artwork
- If printing using PMS- **Pantone colours**:
 - Set PMS colours as **Spot Colours**
 - Indicate the PMS colours within the artwork and colour swatches

4. Fonts

- To avoid font issues during production **outline all fonts** in the final artwork
- If your artwork includes variable data please also supply the font files as **.TTF** or **.OTF**

5. Dielines

If your artwork includes a dieline:

- Keep the **dieline on a separate layer**, set as a Spot Colour
- Allow a minimum 3mm safe area inside the dieline for all important text and logos
- Supply two PDF files:
 - A reference PDF showing the **dieline over the artwork** (for positioning)
 - A print-ready PDF **without the dieline** (this is the file we print from)

6. Multiple Kinds

If your job includes multiple versions (e.g. different designs, types of cards):

- **Each kind must be supplied on its own artboard**, front and back where applicable
- Artboards must be set to **finished size, including 3mm bleed and crop marks**
- If using a dieline, refer to the Dieline specifications

7. Embellishments

If your artwork includes embellishments such as:
Spot UV, Foil, Metallic Toner, Etching, Embossing/Debossing, etc...

- Please clearly **mark these in your artwork** (preferably on a separate layer)
- **Assign a spot colour** for each embellishment
- If using a dieline, refer to the Dieline specifications

For all Embellishments we need vector artwork. Ask your designer to supply you with your vector logo or elements. If that is not possible we can create it for you for an additional cost

Do not merge layers when saving out your print files
